

Amendments to the Claims:

1. (Currently Amended) A communications system having base stations for providing mobile stations with communications links and at least one localized service area, comprising:

a service server which is arranged to maintain information concerning the location of mobile stations in localized service areas and to generate requests for changing the service selection offered to mobile stations in response to receiving, from the mobile stations, mobile station generated messages describing the location of the mobile stations in relation to localized service areas; and

means for changing the service selection offered to a mobile station by the communications system in response to an indication of the arrival of the mobile station in said localized service area, which indication is a message generated by said mobile station separately from obligatory location updates performed when roaming in the cells of a cellular radio network.

2. (Previously Presented) The communications system of claim 1, comprising:

an application server to provide mobile stations with different services in response to a request generated by the service server for changing the service selection.

3. (Previously Presented) The communications system of claim 2, wherein said service server is the same as said application server.

4. (Previously Presented) The communications system of claim 1, wherein it is adapted so as to change a localized service selection offered to a mobile station in response to a notification sent by the mobile station on its arrival in a localized service area.

5. (Currently Amended) A cellular mobile station having a control block, comprising:

memory means adapted so as to store the information required for recognizing a localized service area on which localized services are controlled by a services server;

wherein the mobile station is adapted so as to send a notification of its arrival in the localized service area to the services server in response to the recognition of the localized service area, said notification being intended as an impulse for changing the service selection offered to the mobile station and being sent separately from obligatory location updates performed when roaming in the cells of a cellular radio network.

6. (Previously Presented) The mobile station of claim 5, wherein said memory means is located in a removable memory unit.

7. (Currently Amended) A method for changing the service selection offered to a mobile station in a communications system that has base stations for providing mobile stations with communications links, comprising ~~the steps of:~~

receiving from the mobile station a message that is distinct from obligatory location updates performed by the mobile station when roaming in the cells of a cellular radio network and indicating that the mobile station has detected that it is in the localized service area;

generating information about the arrival of a mobile station in a localized service area; and

changing the service selection offered to said mobile station by the communications system.

8. (Previously Presented) The method of claim 7, wherein in response to the information about the arrival of a mobile station in a localized service area a predetermined additional service is offered to the mobile station.

9. (Previously Presented) The method of claim 8, wherein said additional service involves the sending of announcements to the mobile station.

10. (Previously Presented) The method of claim 7, wherein in response to the information about the arrival of a mobile station in a localized service area the quantity of services offered to the mobile station by the communications system is reduced.

11. (Currently Amended) The method of claim 7, further comprising ~~the steps of~~:  
communicating a message indicating the arrival of a mobile station in a localized service area to a service server;  
checking what services should be offered to the mobile station in that localized service area;  
communicating a request for the services to be offered to an application server providing the services; and  
providing, by the application server, a service to the mobile station.

12. (Currently Amended) The method of claim 11, wherein:  
~~the step of~~ communicating a request to an application server comprises ~~the step of~~:  
communicating the request for the services to be offered to at least two application servers providing services, and  
~~the step of~~ providing, by the application server, a service to the mobile station comprises ~~the step of~~:  
providing, by each application server to which the request for the services to be offered was made, a service to the mobile station.
